SUMMARY

Full Stack Developer with expertise in MERN and MEAN stack technologies, including React.js, Next.js, Angular, Node.js, Express.js, and MongoDB. Experienced in developing responsive web applications and AI-powered computer vision solutions through a research internship at NIT Calicut. Passionate about building scalable applications, solving real-world problems, and continuously expanding my technical skills while contributing to innovative software development.

EXPERIENCE

Civil Engineering Association, NIT Calicut, *Internship* 04/2025 – 07/2025 | Calicut,, Kerala, India

Research Intern – Department of Civil Engineering, NIT Calicut Under the Guidance of Dr. Munavar Fairooz

Contributed to the development of an AI-powered Traffic Management System focused on vehicle detection, tracking, classification, and speed estimation using advanced computer vision techniques. Utilized **Python, YOLOv8, OpenCV, PyTorch, and Roboflow** to collect, annotate, and process traffic datasets, develop and optimize deep learning models, and implement real-time traffic analysis solutions. Gained hands-on experience in object detection, intelligent transportation systems, and AI-based traffic monitoring while collaborating on a research project aimed at improving traffic management and road safety.

LUMINAR TECHNOLAB, *ME(A)RN Full Stack Developer* 05/2026 – Present | Calicut, Kerala, India

MERN Full Stack Development Trainee *Receiving hands-on training in full stack web development using HTML, CSS, Bootstrap, JavaScript, React.js, Next.js, Angular, Node.js, Express.js, and MongoDB. Developing responsive web applications and RESTful APIs through practical projects while following modern development practices.*

EDUCATION

Bachelor's Degree, Physics, *M.A.M.O. COLLEGE, MANASSERY, MUKKAM* 06/2023 – 03/2026

Higher secondary, Computer Science, *Rahmaniya higher secondary school* 06/2021 – 03/2023

SKILLS

- HTML5
- Python
- CSS
- Bootstrap
- React.js
- Next.js
- Angular
- Node.js
- Express.js
- MongoDB
- Mongoose
- REST APIs
- Git
- GitHub
- YOLOv8
- OpenCV

LANGUAGES

- English
- Malayalam
- Hindi

PROJECTS

Food booking Website (GO-FY) 04/2026 – Present

- Designed to make food ordering faster, simpler, and smarter
- Currently working on the frontend development of GO-FY, a modern food booking platform designed mainly for students and travellers. The platform focuses on saving users' waiting time through live food preparation tracking while also providing attractive offers and a smooth ordering experience.
- Built using HTML, CSS, and JavaScript, with a strong focus on responsive design, clean UI/UX, and seamless user interaction.

Key Highlights

- Live preparation time tracking
- Student-friendly offers & discounts
- Responsive and modern interface
- Fast and user-friendly experience
- Frontend focused project development

ML-Based Smart Traffic Management System using Drone Surveillance 04/2025 – 07/2025

- Worked on an AI-powered traffic management system using Machine Learning, YOLOv8, OpenCV, PyTorch, and Drone Technology at National Institute of Technology Calicut under the guidance of Dr. Munaver Fairooz.
- Initially contributed as a part of a research-oriented project under the guidance of Dr. Munaver Fairooz and later implemented my own version independently.
- The project involved collecting real-world traffic data from Indian roads using drones, converting videos into frames through Python scripts, and annotating datasets in Roboflow to classify vehicles such as cars, buses, trucks, motorcycles, and auto-rickshaws. Using YOLOv8 and PyTorch, I trained a custom detection model and generated a trained best.pt file for real-time traffic analysis and speed calculation.

Technologies Used

- Python • OpenCV • PyTorch • YOLOv8 • Roboflow • Machine Learning • Computer Vision

Key Features

- Real-time vehicle detection & classification
- Speed estimation system
- Drone-based traffic monitoring
- AI-powered traffic analysis
- Custom-trained YOLOv8 model
